February 2015’s monthly index of economic activity, IMACEC

According to preliminary information, last February the IMACEC grew 2.0% over the same month a year before. The seasonally-adjusted series dropped 0.6% with respect to the previous month, and increased 1.5% in twelve months. The month came with the same number of working days as February 2014.

The result reflected, mainly, the increase in value added in retail trade and services, which was partly offset by a drop in mining activity.
