August 2014’s monthly index of economic activity, IMACEC

According to preliminary information, last August the IMACEC rose 0.3% over the same month a year before. The seasonally-adjusted series increased 0.5% with respect to the previous month and 0.7% in twelve months. The month came with one working day less than August 2013.

The result reflected the drop in the manufacturing, mining and wholesale trade activities. In contrast, the higher value added from services had a positive incidence.
