# EVOLUTION OF CHILEAN EXTERNAL DEBT

#### Chilean External Debt, 1991 - 1998

#### **External Debt Balances**

Chile's total external debt at December 31st 1998 amounted to US\$ 31,691 million, adjusted by statistical correction and parity changes. This is an increase of US\$ 4,990 million (18.7%) over its level at the end of 1997. The increase is explained by a rise of US\$ 4,667 million (18.4%) in medium- and long-term debt, and of US\$ 323 million (25.1%) in the outstanding balance of short-term debt.

Medium- and long-term debt totaled US\$ 30,081 million at end-1998 and 94.9% of the total borrowing while short-term debt amounted to US\$ 1,610 million, or 5.1% of the total.

<sup>(\*)</sup> Excludes direct credit granted by foreign suppliers.

The weight of private-sector debt in the total external borrowing has grown continuously throughout the 1990s, as its share has risen from 35.5% at the beginning of the decade to 82% in 1998, when the public sector accounted for just 18% (table 2).

1997	26,701	21,613	80.9
1998	31,691	25,977	82.0

Most external financing continued to come from banks, accounting for 51.6% of total medium- and long-term external debt at the end of 1998. The remaining 48.4% was obtained from multilateral agencies (5.9%), government organizations (5.2%), other creditors and suppliers (21.9%), and bonds (15.4%) (table 3).

The share of external financing from multilateral agencies has decreased significantly as a percentage of total mediumand long-term debt, declining from 30% in 1992 to 5.9% in 1998 (table 3). On the contrary, external liabilities arising from private capital have gone up substantially. Financing through bonds issued by Chilean firms abroad has also increased significantly, rising from 1.4% of medium- and long-term debt in 1991 to 15.4% in 1998.

As regards the distribution of external borrowing by type of interest rate at the end of 1998 63.8% was at floating rates and 36.2% at fixed rates. By currency, 95.9% was in US dollars and the remaining 4.1% was mainly in yen and D-marks. Concerning maturity, in 1998 the average term was around 7.7 years.

<sup>(\*)</sup> Refers to exports of goods and non-financial services.

As a consequence of the so called "Asian Crisis", which led to a slowdown in economic growth, a reduction in the country's international reserves, and a steep fall in the prices of main export products, especially copper, the external debt ratios deteriorated during 1998. As can be seen in the chart above, the ratios of total external debt (TD) to gross domestic product (GDP) and to exports stood at 43% and 1.7 times respectively, while the ratio of international reserves to external debt was 51%. Although these numbers are somewhat worse than in the previous year, the external financial position of the country is very solid, and stands favorably in relation to most emerging economies.

In 1998, four sectors accounted for 75% of the country's external debt with maturity over one year: mining (32%), financial Institutions (16%), electricity (15%) and manufacturing industry (12%) (table 5).

The distribution of the debt by economic sector has changed considerably over the period 1991-1998. In 1991, the areas of economic activity with the highest levels of indebtedness were the financial sector (31%), public administration (30%) and mining (18%), whereas today the highest levels are in mining, financial institutions and the electricity sector, as indicated above. The public administration sector reduced its share in medium- and long-term debt from 30% in 1991 to under 8% in 1998; the financial sector, despite still being one of those with the highest levels of indebtedness has cut its share by half since 1991, and finally, the energy sector practically doubled its share over the same period.

These patterns can be explained largely by the process of modernization that the Chilean economy has being going through in recent years. The economic growth achieved during the period has involved large-scale investments in the electrical sector, both in Chile and from our country to other Latin American countries, which has required making use of external financing. Moreover, large-scale mining projects have been developed, increasing direct foreign investment and large external credits.

By the contrary, the reduction in the relative importance of public administration is explained mainly by prepayments made in recent years, especially to multilateral agencies.

During the period under analysis, the participation of transport and communications sector, rose from 2% in 1991 to 10% by the end of 1998, related directly to the growth of the economy.

#### **Capital Flows**

Chile's total debt service in 1998 amounted to US\$ 4,022 million, with amortizations totaling US\$ 2,539 million and interest payments of US\$ 1,483 million. With disbursements of foreign loans amounting to US\$ 7,443 million, the resulting net capital inflow for 1998 was US\$ 3,421 million.

Table 6

TOTAL EXTERNAL - DEBT SERVICE, 1991 - 1998
(Millions of US\$)

YEAR	AMORTIZATION	INTEREST	TOTAL
1991	2,147	1,417	3,564
1992	1,103	1,240	2,343
1993	1,421	1,089	2,510

1997	4,233	1,350	5,583
1998	2,539	1,483	4,022

The debt service ratios in 1998 were relatively stable with respect to 1997. The ratio of medium- and long-term external debt service to GDP in 1998 maintained the previous year's value (5.5%), and the ratio of external debt service to total

exports declined slightly to 21.2%. However, if the prepayments made in 1997 (US\$ 1,068 million) and in 1998 (US\$ 232 million) are excluded, these ratios would suggest some deterioration, with values of 4.1% and 14.9% for 1997 compared to 5.1% and 20% in 1998.

<sup>(\*)</sup> Figures refer to medium- and long-term external debt.

As regards to the main creditors, foreign banks and financial institutions provided US\$ 3,747 million (52.6%), financing obtained via bond issues amounted to US\$ 1,063 million (14.9%), other creditors and suppliers extended credits amounting to US\$ 1,852 million (26%), and the remaining US\$ 458 million were provided by multinational and government organizations (6.5%).

The private sector received US\$ 6,096 million, equivalent to 85.6% of total resources obtained through medium-and long-term external credits. Of these, US\$ 1,698 million were loans associated with foreign investment.

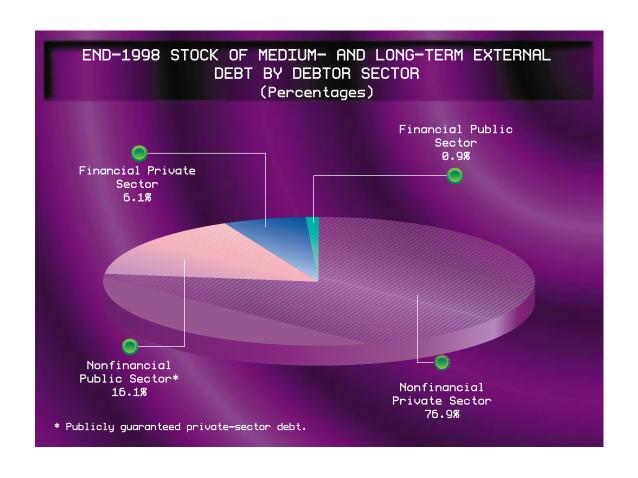

In 1998 companies issued bonds worth US\$ 1,063 billion, including US\$ 650 million contracted by Chileans agencies located abroad, to finance investments outside the country.

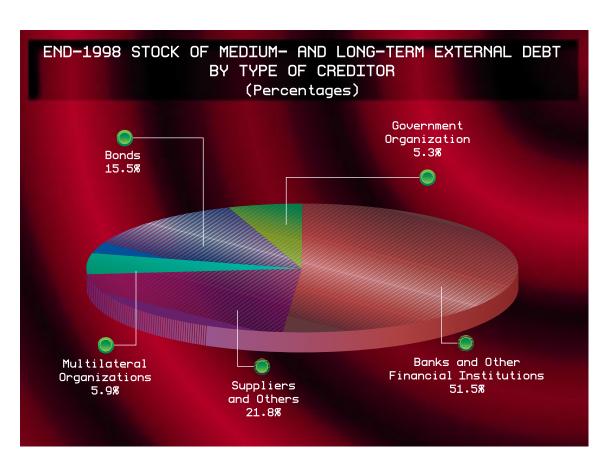

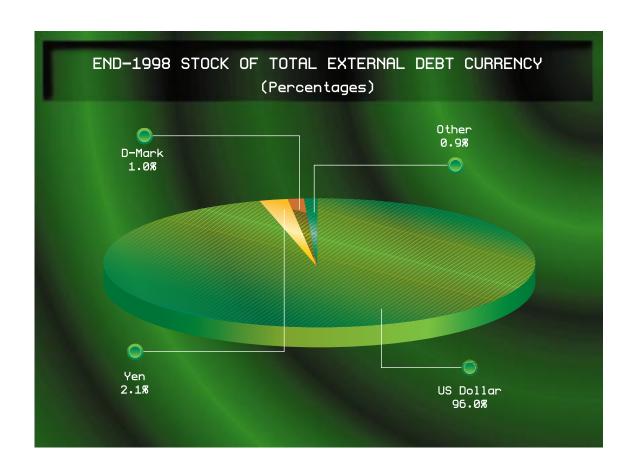

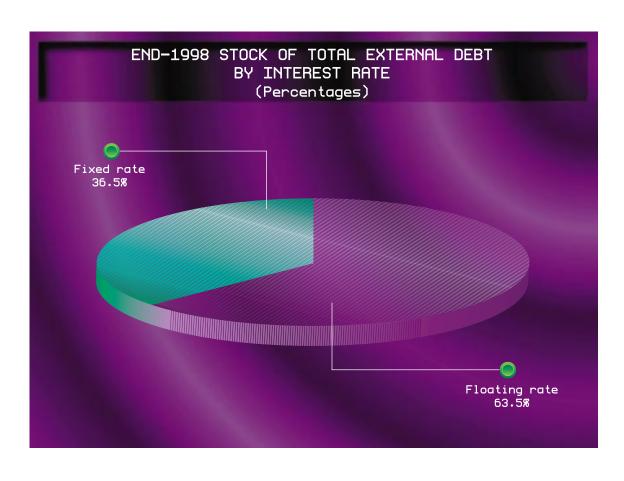

#### ANNEX 1

#### Methodology

This publication provides statistical data on Chile's external debt at December 31st 1998. It covers both short as well as medium-and long-term public and private debt.

The definition of "external debt" is similar to that used by international organizations. Thus the information presented is comparable to that of other countries, bearing in mind, however, that it includes short-term debt.

"Public debt" refers to the external credits disbursed and outstanding, contracted by the public sector and by the private sector when this debt is covered by public guarantee. The public sector is formed by state institutions and companies in which the state holds over 50% of the capital. A "public guarantee", is that which is granted by the State or by public agencies. Consequently, "private debt" refers exclusively to debt contracted by the private sector and not covered by any type of public guarantee.

The expression "short-term" refers to loans with maturity of up to 365 days from the day they are contracted until they are full paid up. Any maturity over 365 days is considered "medium and long term".

Pursuant to procedures used by specialized international organization, the data given in this publication excludes foreign debt repayable in domestic currency and debt with the International Monetary Fund.

Estimated interest payments for 1999 through 2008 (Tables 6, 9, 13 and 22) were based on the following assumption regarding average of annual floating rates for 1999: LIBO (180 days) = 5.22%, and from 2000 on: LIBO (180 days) = 5.25%. Projected interest payments consider the spread over these base rates.

#### ANNEX 2

#### **Definitions**

#### **CONCEPTS**

#### **Flows**

Amounts contracted:

External credits contracted during 1998.

#### Amounts disbursed:

Refers to all or part of foreign loans contracted, that the creditor places at the disposal of the debtor to be used in the period. These disbursements originate from:

- (a) Loans contracted in 1998
- (b) Loans contracted in previous years with undisbursed balances.

#### Amortizations:

Repayments of principal of external credits during the period.

#### Interest paid in the period:

The financial cost of the transaction, including payments of commission and similar expenses.

#### Cancellations:

Partial or total annulments of undisbursed portions of external credits.

#### Situation at December 31st, 1998

#### Net balance:

Total amount disbursed and outstanding at December 31st, 1998.

#### Undisbursed balance:

Partial or total amount of external credit committed but not yet disbursed at December 31st, 1998 corresponding to credits contracted in 1998 and in previous years.

#### Gross balance:

Sum of the net balance plus undisbursed balance. This is a potential debt since it includes amounts that do not yet constitute effective debt.

#### External-debt service:

Sum of amortization and interest payments, including commission and other similar expenses.

Estimated service of external debt for the period 1999-2008 is projected on the basis of the gross balance at December 31st, 1998. It considers a tentative disbursement program of external credits undisbursed at that date.

#### CAPITAL ACCOUNT REGULATIONS
