GENERAL BACKGROUND

LOCATION AND AREA :

Chile is located in the southwest of South America stretching as far south in the Antarctica as to the South Pole itself and with its westernmost province, Easter Island, in the South Pacific Ocean.

On the American continent, Chile stretches from 17°30' S at the northern boundary to 56°32' S at the southernmost tip of South America.

The Chilean Antarctic Territory comprises the whole of the area located south of the 60° S, between meridians 53° and 90° W as far as the South Pole at 90° S.

The national territory comprises several islands in the Pacific Ocean, which add to the country's territorial waters. The nearest to the continent are the islands that form the Juan Fernández archipelago, and San Félix and San Ambrosio islands. The most distant from the mainland are Salas y Gómez and Easter Island or Rapa Nui.

The latter is located at 27° S and 109°30' W, opposite the port of Caldera and 3,760 kilometers away from the mainland.

From the Concordia line to the South Pole, the country is over 8,000 kilometers long. The area of South American, Antarctic and Oceanic Chile is 2,006,096 sq./km, with 756,096 sq./km corresponding to South American and insular Chile and 1,250,000 sq./km to the Chilean Antarctic Territory.

SOUTH AMERICAN AND INSULAR CHILE	sq. km	Share (%)
Total	756,096	100.0
Cropland	21,204	2.8
Grazing land	145,000	19.2
Forest land	117,124	15.5
Non-productive land	472,768	62.5
CHILEAN ANTARTIC TERRITORY	1,250,000	
TOTAL	2,006,096

**BOUNDARIES:**

Chile is bounded on the north by Peru, by a border line known as Línea de la Concordia; on the east by Bolivia and Argentina, mainly by a line that runs through the highest summits of the Andes; on the south by the South Pole, and on the west by the Pacific Ocean, including 200 nautical miles of territorial waters.

CLIMATE AND NATURAL RESOURCES:**The North**

Climate: Warm desert.

Natural resources: Nitrate, copper, iron, lithium and other minerals, valleys suited for agriculture, and sea foods.

The Center

Climate: Mild and temperate, with rains in winter.

Natural resources: Agricultural lands especially suitable for fruitgrowing, wine-growing, grazing lands, forests, hydroelectric power (rivers), copper and sea foods.

The South

Climate: Temperate and rainy.

Natural resources: Agricultural and grazing lands, forests, hydroelectric power (rivers) and sea foods.

The Far South

Climate: Cold steppe.

Natural resources: Forests, petroleum, natural gas, coal, limestone, sheep, and sea foods.

(1) Sample stations are mentioned with the commune name where they are located.

(2) MP10: particles in suspension with a 10-micron or less aerodynamic diameter. It is measured in microns per cubic meter ($\mu\text{g}/\text{m}^3\text{N}$); figures are annual means computed from consecutive 24-hour moving averages. The maximum acceptable MP10 is $150 \mu\text{g}/\text{m}^3\text{N}$.

(3) Icap: Air quality index referred to particles in suspension in accordance with MP10 levels. Thus for each MP10 level the equivalence is as follows: 0-150 $\mu\text{g}/\text{m}^3\text{N}$ corresponds to a 0-100 Icap, classified as Good; 151-195 $\mu\text{g}/\text{m}^3\text{N}$ is a 101-200 Icap (Regular); 196-240 $\mu\text{g}/\text{m}^3\text{N}$ is a 201-300 Icap (Bad); 241-285 $\mu\text{g}/\text{m}^3\text{N}$ is a 301-400 Icap (Critical); 286-330 $\mu\text{g}/\text{m}^3\text{N}$ is a 401-500 Icap (Dangerous), and over 330 $\mu\text{g}/\text{m}^3\text{N}$ is an over 500 Icap (Excess).

(4) Puente Alto, Talagante and Quilicura stations are not considered when alert, pre-emergency or emergency environmental events are decreed by the authority.

POPULATION

GENERAL BACKGROUND:

According to past censuses, in 1835, Chile had a population of 1,103,036; in 1895, 2,695,625; in 1907, 3,231,022; in 1940, 5,023,539; in 1960, 7,374,115; in 1970, 8,884,768; in 1982, 11,329,736; in 1992 13,348,401; and the latest 2002 population census registered 15,116,435 inhabitants which for 2011 was estimated at 17,248,450 inhabitants.

This steady growth of the population is mainly due to moderately high birth rates (until 1961, the birth rate was 34 in a thousand, on average) and to a decreasing mortality rate, from 25 to 12 deaths in a thousand between 1933 and 1961.

Around 1961 the birth rate began to decrease to 14.7 births in a thousand in 2010, while mortality was 5.7 deaths in a thousand in 2010. This produced a gradual decrease of natural growth, as well as on the rhythm of the total population average growth.

In turn, these changes are due to modifications experienced by two components of the Chilean population, fertility and mortality—the other is migration—from high to low levels⁽¹⁾; this process, known as demographic transition, impacts the population pyramid, and since it began in 1961, today it presents an advanced phase of elderly population.

An elderly population is characterized by low birth and death rates. In terms of age it means a lower proportion of people aged under 15 years and a relative increase of people of 60 or more years. As a matter of fact ⁽²⁾, in Chile, in 1960, there were 19 individuals of 60 years or older in one hundred children, aged 15 or less. In 2011 this figure is estimated at 60.

Until 1930, the population was predominantly rural: in 1875, 65.1% and in 1920, 53.6%. The 1940 census reversed the situation and nowadays, according to the census of 2002, only 13.4% of the population is rural.

Today South American and insular Chile has a population density of 22.8 inhabitants per square kilometer.

(1) In 1961 each woman at the end of her fertile period contributed with 5.4 children as an average, whereas in 2010 she contributes only with 1.9 child. A newborn in 1960 had a life expectancy of 58.1 years whereas in 2011, he is expected to live 79.1 years.

(2) The oldest adults index is a measure of older population process: Calculated as a ratio between the 60 year and older population and the amount of people aged 15 years or less, multiplied by one hundred, and it expresses the number of 60-year and older people for each hundred children (15 years or less).

SYSTEM OF GOVERNMENT, AND POLITICAL AND ADMINISTRATIVE ORGANIZATION

According to the Political Constitution of 1980, Chile is a unitarian state. For interior administration and government, the country is divided into regions and these into provinces. For local administration, the provinces are divided into communes.

Regional government is the responsibility of the Intendent, who is the immediate representative of the President of the Republic and is answerable directly to him.

At the head of the regional administration is the Regional Government with full legal capacity and its own assets. It consists of the Intendent, its maximum authority, and the Regional Council which has normative, resolving and supervisory capacities.

Provincial government corresponds to the Governor, also answerable directly to the President of the Republic and subordinate to the Intendent. He administrates in representation of the Intendent and is assisted by a consultative Provincial Social and Economic Council of which he is the Chairman and he may also constitute a Technical Advisory Committee.

Local communal administration is carried out by the Municipality, an autonomous public body with full legal capacity and its own assets. It consists of the Mayor and his Council with normative, resolute and supervisory capacities. At the same time, each commune has a Communal Social and Economic Council, chaired by the Mayor, which has consultative duties. The Mayor is the chairman of

the Council and, is elected by public vote. The councillors are proportionally elected by public vote.

Most of the Ministries and National Public Services are decentralized territorially by way of Ministerial Regional Secretariats and Regional or Provincial Directions respectively, the latter being subordinated to the Ministerial Regional Secretary and both subordinate to the Intendent.

Furthermore, in each region there is a Regional Cabinet to assist the Intendent integrated by Governors, Ministerial Regional Secretaries and by regional heads of state administration nominated by the Intendent.

THE REGIONS AND THEIR CAPITALS:

Decree Law 575 (10 July, 1974), divided the Chilean territory into thirteen regions. Later on, Law 20174 published on the *Official Gazette* of 5 April 2007 established Region XIV and Law 20175 published on the *Official Gazette* of 11 April 2007 established Region XV, becoming a total of fifteen regions.

(1) This index measures delivery evolution to construction, manufacturing, wholesale, and hardware companies. The sample includes, cement, round iron bars, fiber-cement products, copper pipelines, bricks, insulators, glass, PVC pipes, and gypsum cardboards.

(2) Includes direct imports carried out by domestic producers.

(3) Information on cement and pre-mixed concrete delivery from the Chilean Institute of Cement and Concrete.

(4) Monthly averages of each year. Index measures net invoicing of construction works performed by a sample of 32 building firms members of the General Contractors Committee of the Chilean Chamber of Builders.

(5) Monthly averages for each year. The Imacón series is seasocially and calendar adjusted.

(6) Monthly averages for each year. Index measured on the basis of updated unit costs of a 73 DFL-2 one-story, 69.8 square meters dwellings group, built up in Santiago.

(7) The Real housing price index (IRPV) is a set of price indices of new house in Greater Santiago, computed by the Chilean Chamber of Builders (*Cámara Chilena de la Construcción*) based on a hedonic prices methodology mostly used in developed countries. They are actual indices since they are estimated on house sale prices expressed in UF (IPC indexed unit).

(8) The Months item is computed from the stock divided by the number of dwellings sold. Figures are monthly averages for each year. This indicator is intended to show the time until the stock will be sold out.

(9) Data gathered by the National Statistics Bureau (*Instituto Nacional de Estadísticas*, INE) through the approved construction permits, with increased built up area, extended by the corresponding Municipal Works Office all over the country. New work means any new independent structure built up on a new area.

(1) Includes 93, 95 and 97 octane gasoline.

(2) Includes public service generators and self generators.

(3) Includes iron and steel industry and regular gas plants.

(4) Includes coal consumption.

(5) Methanol production plants.

(6) This index summarizes electric power consumption measured in megawatts, pipeline gases in cubic meters, and drinkable water for general public in cubic meters. Measure is done through delivery carried out by agents responsible of these activities to intermediate and final consumers.

(1) As of April 2010, the New National Employment Survey (*Nueva Encuesta Nacional de Empleo, NENE*) replaced the former National Employment Survey (*Encuesta Nacional de Empleo, ENE*) operative since 1966. This new measure is based on concepts and criteria on line with international standards and with the best methodological and working practices of the OECD member countries. From the statistics standpoint this modernization includes the recommendations of International Meetings on labor statistics of the ILO. The innovations encompass conceptual changes on employment conditions classification (employed, unemployed, and passive); changes in the measurement through design of a new questionnaire; incorporation of new subjects for analyses and indicators; and the updating of the classification nomenclature in use.

(1) The index of wages (*I/R*) measures the monthly evolution of regular hourly remuneration paid to permanent or temporary contracted workers by firms with five or more employees.

(2) The labor cost index (*ICMO*) measures the monthly evolution of the total hourly labor paid, regular remunerations, and expenses incurred to by firms in order to maintain their workers.

(3) Index deflated by Consumer Price Index (*CPI*), published by the National Statistics Bureau (*INE*). It is presented in November since this month, the 12-month variation, when positive, is added to the maximum amount, expressed in UF\$, used to determine the legal contribution to the pension fund of workers.

(4) Regular hourly remuneration includes only regular hourly payments, excluding any other occasional payment.

(5) Total hourly remuneration encompasses both regular and extra hours.

(6) Labor cost includes remuneration plus employer costs for compensation expenses on workers (lunch, transportation, training, welfare services, and so on).

(7) Includes only the hours elapsed within the usual workday.

(8) Refers to the number of hours that exceeds the usual workday that legally sum up 45 hours a week, or the amount established by contract.

(9) Corresponds to regular plus extra hours of work.

(10) Corresponds to the minimum legal amount an employer must pay to any private-sector worker in retribution for his services. This amount is also used to calculate the worker's minimum legal contribution to his pension fund.
