7 ECONOMIC AND FINANCIAL REPORT OCTOBER 2002

11 CHILE'S FOREIGN DEBT AT SEPTEMBER 30TH 2002

13 STATISTICAL TABLES

13 I. PRODUCTION AND EMPLOYMENT

13	Monthly Indicator of Economic Activity (Imacec)
14	Quarterly gross domestic product by type of economic activity
17	Gross domestic product by type of economic activity (At constant price)
17	Gross domestic product expenditure (At constant price)
17	Gross domestic product expenditure (At current price)
18	Quarterly gross domestic product expenditure
19	Product income (At constant price)
19	Product income (At current price)
19	Product income relation
20	Quarterly gross domestic product (At current price)
21	Quarterly product income (At current price)
22	Quarterly gross domestic product (At constant price)
23	Industrial output indices
24	Industrial sales indices
25	Employment and unemployment (INE)
26	National employment and unemployment seasonally adjusted series (INE)
27	Employment and unemployment in Greater Santiago (Univ. of Chile)
28	Public and private sector building approved and underway
29	Mining production index

30 II. MONEY, CREDIT AND INTEREST

30	Monetary base: sources of changes (Monthly balance)
31	Monetary base and currency (Monthly average)
32	Private money (M1A) (Monthly average)
33	Total private financial savings (M7) (Monthly average)
34	Private monetary aggregates (Monthly average)
35	Short-term private monetary aggregates, seasonally adjusted (Monthly average)
36	Detail of private monetary aggregates (Monthly average)
37	Central Bank of Chile assets and liabilities (Monthly balance)
38	Banking-sector assets and liabilities (Monthly balance)
39	Government sector's money stock (Monthly average)

40	Loans in domestic currency (Monthly average)
41	Loans in domestic currency (Percentage change)
42	Loans in foreign currency (Monthly average)
43	Loans in foreign currency (Percentage change)
44	Interest rates on the Central Bank of Chile instruments
46	Average interest rates of the financial system

47 III. PRICES, SALARIES AND EXCHANGE BALANCES

47	Price indices
48	Index of hourly wages
49	Labor cost index
50	Average of the observed and reference exchange rates
51	Multilateral exchange-rate index (MER)
52	Real observed exchange rate (RER)
53	External price indices relevant to Chile (EPI)
54	Exchange balance of the formal exchange market (MCF)
55	Amount of forward operations in currencies within the MCF
56	Amount and price of forward operations (peso/dollar) within the MCF
57	Amount and price of forward operations (UF/dollar) within the MCF

58 IV. EXTERNAL SECTOR

58	Balance of payments by quarter
59	Trade balance and balance of payments
60	Trade balance by country
61	Exports of goods
62	Exports of general regime by economic activity
63	Mining exports
64	Agriculture, livestock, forestry and fishing exports
65	Manufacturing exports
66	Non-traditional exports of general regime
67	Exports by country (fob)
70	Imports of goods
71	Imports of general regime by commodity group (cif)
72	Seasonally adjusted total imports and non-oil imports (cif)
73	Imports by country and type of goods (fob)
76	Annual index of goods-export volumes, prices and values
76	General regime. Annual index of goods-export volumes, prices and values
77	Quarterly index of goods-export volumes, prices and values

77	General regime. Quarterly index of goods-export volumes, prices and values
78	Annual change in volume, price and value of goods export
78	General regime. Annual change in volume, price and value of goods export
79	Quarterly change in volume, price and value of goods export
79	General regime. Quarterly change in volume, price and value of goods export
80	Annual index of goods import volumes, prices and values
80	Quarterly index of goods import volumes, prices and values
81	Annual change in volume, price and value of goods import
81	Quarterly change in volume, price and value of goods import
82	Price of copper, fishmeal, crude oil and pulp

Economic and Financial Report October 2002

Preliminary figures indicate that economic activity in August was 1.7% more than a year ago. However, it should be borne in mind that there was one working day less in August this year which pulls down the figure for activity by 0.5 to 1 percentage point. The monthly indicator (Imacec) has thus risen by an average of 1.7% a month in the first eight months of 2002. The index at factor cost rose by 1.2% compared to August 2001 and the seasonally adjusted index was 1.6% higher than in July.

Consumer prices (CPI) in October were 0.9% higher, bringing the annual rate of inflation to 3.0%. Underlying inflation (CPIX), which excludes prices of fresh fruit and vegetables and fuels, increased by 0.4% in October and 2.0% in the past twelve months.

The main price rises were in food (1.5%), housing (1.3%) and transport (1.6%) and there was a tiny rise in education and recreation (0.1%). Prices of clothing and health registered no change this month and prices of household goods and miscellaneous goods went down by 0.1% and 0.9% respectively.

Tradable goods prices (CPIT) went up by 0.8% and nontradables (CPIN) by 0.9%, bringing their year-on-year increase to 2.4% and 3.7% respectively.

The wholesale price index (WPI) rose by 3.5% in October with locally-produced goods up by 3.2% and imported goods by 4.3%. Wholesale prices have thus risen by 10.9% in the past year, locally-produced goods by 11.1% and imported goods by 10.5% (table 30).

According to the National Statistics Bureau (INE), industrial output in September was 5.2% higher than a year ago reflecting the increased production of durable consumer goods (5.7%) and intermediate goods (9.8%), whereas production of regularly consumed goods and capital goods decreased by 1.3% and 27.0% respectively.

INE found that industrial sales were 7.0% more than in September 2001. There was a further substantial drop in sales of capital goods (-23.2%) but increases in sales of regularly consumed goods (2.9%), durable consumer goods (0.4%) and intermediate goods (10.9%).

According to the Manufacturing Development Association (Sofofa), industrial output in September was up by 0.5% and industrial sales increased by 2.8%.

INE's national employment survey in the July through September moving quarter registered employment growth of 0.3% while the workforce was 0.2% smaller. Unemployment thus edged up to 9.7%,

0.1 percentage points up on the previous moving quarter although 0.4 percentage points lower than in the same three months of last year. Allowing for seasonal factors, unemployment dropped to 8.5%.

In the Santiago Metropolitan Region in these three months, 8.4% of the workforce were unemployed, which is 0.6 percentage points lower than in the same period of 2001 but 0.5 percentage points more than in the previous moving quarter.

The University of Chile's survey of Greater Santiago registered unemployment of 13.5% in September which is 1.4 percentage points down on September 2001 and 0.1 percentage points lower than in the previous survey in June.

Nominal earnings in September as measured by the hourly earnings index and the labor cost index registered annual increases of 4.2% and 4.5% respectively. In real terms, their annual growth was similar to that of August, 1.9% for hourly earnings and 2.2% for labor costs.

Interest rates on nominal Central Bank papers in general tended to rise slightly in October in line with both effective and expected inflation. 30-day and 90-day PDBC were traded at 2.96% and 3.03% respectively. Nominal longer-term papers were also traded at higher rates, 2-year BCP averaging 4.48% and 5-year BCP 6.35%.

Interest rates on indexed transactions followed a similar trend rising by around 30 basis points in October. 5-year BCU were thus traded at an average of 2.94%, 10-year BCU at 3.96% and 20-year BCU at 4.78%.

Interest rates on indexed transactions in dollars (BCD) were also about 80 basis points higher than in September, averaging 3.78% on 2-year BCD and 5.28% on 5-year BCD.

Market rates only varied slightly in October, the yield on 30- to 89-day deposits rising to 2.76% while the lending rate crept down to 6.24%. At 90 to 365 days, the average yield edged up to 3.12% while the rate on loans remained at 12.84% the same as in September.

Interest rates on indexed transactions at all maturities dropped because of the rising consumer price inflation. At 90 to 365 days, only a few transactions took place and the rate on deposits was a negligible 0.03% and 2.37% on loans.

Short-term monetary aggregates contracted in October as is usual in this month and reverting their expansion in September. Broad private money (M1A) contracted by 0.6% and money in circulation by 2.5%, which means that their annual rate of expansion remained around 17.3% and 11.9% respectively. Base money averaged a 4.0% contraction in October.

The nominal exchange rate in October averaged 742 pesos to the dollar, a 2.1% depreciation in the month. However, the exchange rate varied greatly within the month and there was a 2.0% appreciation between the beginning and end of October. The multilateral exchange rate, MER and MER-5 (based on the US dollar, Canadian dollar, yen, pound sterling and euro) registered respectively 0.4% and 1.7% depreciation in the month. Finally, during September the real exchange rate index, RER and RER-5 both registered a monthly appreciation of 2.4% (tables 33 and 35).

The trade balance at end-September came out of deficit, registering a surplus of US\$6.5 million. The increase since August resulted from exports worth US\$1,344 million and imports US\$1,338 million.

The total value of exports was 14.8% higher than in September 2001. Copper exports were again reduced by 10.3% but non-copper exports increased by 30.3% with main exports up by 92.8% and other exports by 14.2%. The difference with the overall result is explained by other less important components of the trade balance (duty free zone, non-monetary gold, etc.) which registered an annual variation of 15.2%.

Imports had increased significantly in August but fell in September, 4.5% down on a year ago. Consumer goods imports were 9.5% more than in September 2001, but intermediate goods and capital goods were both reduced by 3.3% and 15.2% respectively.

Net foreign currency holdings in October amounted to US\$14,911 million, US\$171.4 million more than in September because the Treasury and commercial banks increased their operational deposits held in the Central Bank and there were interest gains from the portfolio. There were exchange transactions with the Treasury amounting to US\$7.3 million.

Chile's Foreign Debt at September 30th 2002

Chile's foreign debt totalled US\$39,204 million at 30th September 2002 which is US\$1,172 million more than at end-December 2001. 84% of total debt corresponds to the private sector.

Medium- and long-term foreign loan disbursements in the first nine months of the year amounted to US\$3,759 million, 68% of which, equivalent to US\$2,560 million, went to the private sector.

Sources of medium- and long-term foreign financing in 2002 to date have been international financial institutions (63.0%), bond issues (23.0%), companies associated with foreign investment and suppliers (9.0%) and multilateral and government organizations (5.0%).

In the same period, amortizations of medium- and long-term foreign debt amounted to US\$3,424 million, of which US\$803 million correspond to the public sector and US\$2,621 million to the private sector. 69.0% of total amortizations were made to international banks and financial institutions, 17.0% to companies associated with foreign investment and suppliers, 13.0% to multilateral and government organizations and the remaining 1.0% to bond recovery.

Foreign debt of one-year maturity according to residual term amounted to US\$7,032 million at 30th September 2002 and represented 18.0% of total borrowing. This amount comprises US\$5,282 million in loans with a term of more than one year that will mature during the next twelve months and US\$1,750 million in loans of an original term of up to one year.

- (1) Provisional figures corresponding to the new Imacec based on the 1996 input-output matrix. This indicator covers almost all the economic activities included in the GDP.
- (2) Computed on the basis of the X -12 ARIMA model available at www.census.gov. The seasonally adjusted series excludes the seasonal and calendar effects. The cyclical tendency series corresponds to the seasonally adjusted series dismissing the irregular component. The ARIMA model selected is (2,0,0)(0,1,1). For more detailed information on the seasonal-adjusting methodology see www.bcentral.cl/Estudios/DTBC/177/dtbc177.pdf. The original series was seasonally adjusted for the 1986-2002 period. The overlapping of the 1986-1995 period with base on 1986 was made preserving the 12-month rate on said basis. This series is not strictly comparable to the quarterly seasonally adjusted GDP growth, because the results of the seasonal adjustment procedures are not equivalent when applied to different frequency series (in this case: GDP and Imacec).
- (3) Corresponding to the original series minus indirect taxes.
- (4) Change of the cumulative average of a period ending in the specified month as compared to the same period of the previous year.
- (5) December to December change.

(1) Computed on the basis of the X-12 ARIMA model available at www.census.gov. The seasonally adjusted series excludes the seasonal and calendar effects. The ARIMA model selected is (1,0,0) (0,1,1). In order to improve the seasonally component, as from March 2001 the method to correct the holidays was modified. The original series was seasonally adjusted for the 1986-2002 period. The overlapping of the 1986-1995 period with base on 1986 was made preserving the interannual quarterly rate on said basis.

(2) The quarterly seasonally adjusted GDP series growth is not strictly comparable to the quarterly seasonally-adjusted Imacec growth, because the results of the seasonal adjustment procedures are not equivalent when applied to different frequency series (in this case: GDP and Imacec).

(3) Provisional figures, including new calculation of home ownership.

(4) Preliminary figures, including new calculation of home ownership.

(1) Excludes copper smelting and refining.

(2) The series has been seasonally adjusted on the basis of the X-12 ARIMA model, including the effects of Easter, leap years and a vector that adjusts to the number of working days in the week. The ARIMA model used for this index is (2,1,0) (0,1,1) and the seasonally moving average of Henderson in both cases is 3x5.

(3) Change of the cumulative average of a period ending in the specified month as compared to the same period of the previous year.

(4) Provisional figures. Sofofa's figures are provisional as from 1999.

(5) December to December change.

(1) The series has been seasonally adjusted on the basis of the X-12 ARIMA model (available at www.census.gov) including the effects of Easter, leap years, and a vector that adjusts to the number of weekdays, taking holidays into account.

The seasonal moving average of Henderson used is 3x9.

(2) The ARIMA model used is (0,1,1)(0,1,1).

(3) The ARIMA model used is (0,1,1)(0,1,1).

(4) The ARIMA model used is (2,1,0)(0,1,1).

(5) Provisional figures for the original series.

Symbols:

C: Currency in circulation.

D1A: Nonfinancial private-sector checking accounts and other demand deposits net of float, less deposits of the Treasury Banking Account, plus demand savings deposits. Float corresponds to documents received by the banks extended against all type of deposits (public, private and interfinancial).

Dp: Time deposits of private sector.

Ahp: Time savings deposits, including those for housing.

(*) Provisional information obtained through daily reports provided by the financial system.

(1) Corresponds to the mean weighted trading rate in that month, on promissory notes sold by tender.

(2) Real annual rates corresponding to the monetary policy rate (MPR) established by the Central Bank of Chile. Until 8 August 2001 the annual interest rate was applied over the UF change. As from 9 August 2001, the Central Bank of Chile decided to use a nominal monetary policy rate, setting it at 6.5% a year.

(3) Nominal rates with annual base on promissory notes sold by tender.

(4) Annual rates indexed in accordance with the UF change on promissory notes sold by tender.

(5) Annual rate on the observed exchange rate.

	Dec.									

(1) The multilateral exchange-rate index (MER) is a measure of the nominal value of the Chilean peso with respect to a wide basket of foreign currencies. See note on methodology in the *Economic and Financial Report* of January 2000. As from January 2001 the MER includes China and Sweden. (See note on methodology, page 15 of the *Economic and Financial Report* of March 2001).

(2) The MER-5 refers to the currencies of The United States, Japan, The United Kingdom, Canada and the Euro area.

(3) Average annual change.

(4) December to December change.

35. Real observed exchange rate (RER) ⁽¹⁾

(1986 Average = 100)

Date		Total RER (2)				RER-5 (3)			
		Value	Percentage change			Value	Percentage change

(1) Provisional figures.

(2) The real exchange rate is the observed nominal exchange rate multiplied by the quotient between relevant external inflation and the domestic consumer price index (CPI). External inflation is calculated using the WPI, in dollars, of Chile's main trading partners, weighted according to their relative importance in terms of imports and exports - excluding oil and copper. Both the WPI and the countries' exchange rates are in terms of monthly variations. As from January 2001 the real observed exchange rate (RER) includes China and Sweden. (See note on methodology, page 15 of the *Economic and Financial Report* of March 2001). As from January 2002 fuels (oil and its by-products and natural gas) are excluded. (See note on methodology, page 15 of the *Economic and Financial Report* of August 2002).

(3) Same definition as (2) but considers the following industrialized countries: The United States, Japan, the United Kingdom, Canada and the Euro-area countries (Germany, France, Spain, Italy, the Netherlands and Belgium). For fuller information on the new RER-5 index which refers to the five main industrialized countries trading with Chile see the *Economic and Financial Report* of January 2000.

(4) Average annual change.

(5) December to December change.

36. External price indices relevant to Chile (EPI) (1)

(1) Provisional figures, including banks and money exchange bureaus of the formal exchange market (MCF).

(2) Data at end of each month, unless otherwise stated.

(3) Represents balance at end of each month, of cash exchange position of banks and money exchange bureaus of the MCF.

(4) Represents purchases less forward sales at the specified date, including operations in pesos and indexed units (UF).

Plus sign : Purchase net balance.

Minus sign : Sales net balance.

(5) Spot balance plus forward balance.

(6) As from 30 May 2002, includes operations carried out pursuant to Chapter IV D.1 of the Compendium of Financial Regulations (CNF) of the Central Bank of Chile and foreign currencies' exchange operations (other than dollar) with Chilean pesos and UFs.

38. Amount of forward operations in currencies within the MCF (formal exchange market) (*)

(US\$ million)

(1) Provisional figures.

(2) Trade Balance figures represent actual imports and exports, based on statistics of the National Customs Service to which the pertinent coverage and valuation adjustments have been made in order to arrive at the figures used in the Balance of Payments.

(3) Balance of Payments: Corresponds to changes in international reserves resulting from balance of payments transactions excluding changes in reserves such as those produced by revaluations, gold monetization and allocation of SDRs. For further explanation refer to the *Boletín Mensual* of the Central Bank of Chile (April, 1981). As from 1993, figures have been calculated to incorporate price restatement of assets.

(*) Provisional figures. Classification of imports has been modified to bring it into line with that of National Accounts. The modification affects figures as from 1990. In consideration of the nature of the goods and also the specific uses to which they may be put, certain consumer- and capital-goods imports had to be reassigned to the intermediate-goods category. In some cases the category has been determined by the end use.

53. Seasonally adjusted total imports and non-oil imports (1)

(US\$ million cif)

(1) Provisional figures. The export-price index corresponds to the Paasche index, while the volume index corresponds to the Laspeyres quantum index.

Both are calculated with base 1996 = 100, so the changes registered do not coincide with the figures given in table 57. These calculations exclude exports of repairs on goods.

(2) General regime exports only.

(3) Gold excluded.

56. Quarterly index of goods-export volumes, prices and values (1)

Dec.																

- (1) Prices supplied by the London Metal Exchange (LME) and informed by the Chilean Copper Commission (Cochilco).
- (2) Average fob export price computed from shipment value divided by volume. Shipment values, provisionally reported by Customs' statements, are afterwards adjusted. In the previous series these corrections were imputed to the values of the month in which they were provided. The new series, instead, imputs them to the month of the statement being adjusted. For this reason the information of recent months may change again.
- (3) Average cif import price from Customs' statements computed from shipment value divided by volume.
- (4) Cumulative weighted average change of that month with respect to the annual average of the previous year (copper average is not weighted).
- (5) These annual averages are not coincident with monthly figures, because monthly prices have been weighted by each month volume. However the annual average for copper is based on daily data.
- (6) December to December change.
- (-) Not available.

a/ Data on Internet (www.bcentral.cl ; www.bolsantiago.cl ; or www.ine.cl).

b/ The 12-month change of the economic activity index and the totals on imports, exports and trade balance are published on Internet (www.bcentral.cl/ under "new in this site"), between the 17th and the 23rd of each month, or the following working days if they were holidays. From the later date onward, these data, including additional and complementary information, are included in the "Informe Económico y Financiero", and in the permanent website. "Informe Económico y Financiero" is a fortnightly publication of the Banco Central, summarized in this monthly "Economic and Financial Report".

c/ Deadline. Unless unforeseen circumstances, the exact dates of data releases are informed on Internet no later than the week prior to the data release (www.bcentral.cl/, under "economic data"/"release of economic statistics")

d/ Releasing is made before the beginning of transactions of the next working day.

e/ Releasing is made the next day after the close of transactions.

f/ On the first date, information covers the first half of the month in question, on the second and third dates, information of the whole month is given.
