Economic and Financial Report

December 2002

Preliminary figures for the Monthly Indicator of Economic Activity (Imacec) in October indicate growth of 2.4% over the past year, thus year-on-year growth in the first ten months of 2002 averaged 1.7%. The index at factor cost rose by 2.8% compared to October 2001 while the seasonally adjusted index was 0.1% higher than in September. There was one more working day in October this year.

The consumer price index (CPI) dropped 0.4% in December, bringing annual inflation down to 2.8%. Core inflation (CPIX), which excludes prices of fresh fruit and vegetables and fuels, edged up 0.1% in December thus bringing its twelve-month growth to 1.8%.

December's negative inflation rate was due to lower prices of most goods and services: transport -1.6%, miscellaneous goods -1.1%, clothing -0.8%, food -0.6% and health -0.2%. Prices of education and recreation and housing rose by 0.2% and 0.1% respectively while prices of household goods remained unchanged.

In annual terms, price increases of the main groups of goods were: health up 4.8%, housing 4.1%, transport 3.5%, food 3.5%, and education and recreation 3.4% whereas prices of clothing and miscellaneous goods were lower than in 2001, falling by 3.8% and 3.3% respectively. Household goods prices were the same as in the previous year.

Prices of both tradable and nontradable goods dropped during December with tradable goods prices (CPIT) going down by 0.4% and nontradable-goods prices (CPIN) falling by 0.5%, bringing their year-on-year growth to 2.5% and 3.1% respectively.

Wholesale prices (WPI) went down by 1.9% in December, with locally-produced goods down by 1.9% and imported goods by 2.1%. Wholesale prices have thus gone up by 10.4% in 2002 with locally-produced goods prices rising by 10.8% in the year and imported goods prices increasing by 9.4%.

According to the National Statistics Bureau (INE), industrial output in November was 0.2% more than a year ago, reflecting a hefty 27.6% decrease in capital goods production and a 4.0% decrease in regularly consumed goods. On the other hand, output of durable consumer goods and intermediate goods increased by 3.3% and 3.2% respectively.

INE reported industrial sales growth of 2.0% in November compared to the same month of 2001. Sales of capital goods continued the falling trend of recent months but more slowly, dropping by

1.8% in November, while sales of durable and regularly consumed goods fell by 11.4% and 2.5% respectively. Only intermediate goods sales were 5.7% up on November 2001.

According to the Manufacturing Development Association (Sofofa), industrial output in November increased by 1.1% and industrial sales by 0.6% compared to a year ago.

INE's national employment survey in the September through November moving quarter registered 0.4% growth in employment compared to the same three months of 2001, while the workforce expanded by 0.5%. The unemployment rate was thus 0.8 percentage points lower than in the previous moving quarter and 0.1 points down on a year ago. Excluding seasonal factors, unemployment edged down to 8.9%.

In the Santiago Metropolitan Region in these three months 8.4% of the workforce were without a job which is 0.3 percentage points less than in the previous moving quarter and 0.4 percentage points down on a year ago.

Nominal earnings in November, as measured by the hourly earnings index and the labor cost index, rose by 4.3% and 4.4% respectively, and in real terms by 1.3% and 1.4%.

Interest rates on nominal Central Bank papers in December behaved differently at different maturities. 30-day PDBC were traded at 2.80% on average, some twelve basis points lower than in November, whereas the yield on 90-day PDBC was fractionally higher than last month averaging 2.88%. 2- and 5-year bonds were traded at an average of 4.06% and 5.70% respectively which is marginally higher than last month for 2-year BCP and some 20 basis points lower for 5-year BCP.

Interest rates on long-term indexed promissory notes (BCU) rose again in December averaging 3.20% on 5-year BCU, 4.09% on 10-year BCU and 4.93% on 20-year BCU (fifteen basis points up on the rate in November).

Indexed transactions in dollars (BCD) registered lower interest rates than in November, averaging 3.18% on 2-year BCD and 4.63% on 5-year BCD.

The spreads between interest rates on deposits and loans in pesos continued to shrink during December as interest charged on loans was reduced. Thus at 30 to 89 days, the average yield on deposits stayed at 2.76% while the rate on loans dropped to 6.12%. At 90 to 365 days, the yield on deposits remained at 3.12% while the rate on loans fell to 11.76%.

Interest rates on indexed transactions at all maturities were pushed up by the negative CPI in the past two months. This was most marked in the case of 90- to 365-day deposits and loans which averaged 3.46% and 5.45% respectively.

Short-term monetary aggregates in December expanded as is usual at this time of year but less than they did last year. Broad private money (M1A) registered growth of 8.7% while money in circulation expanded by 8.1%. Their annual growth rates thus came down to 16.8% and 9.5% respectively. Base money registered an average expansion of 8.3% in December.

The nominal exchange rate in December averaged 702 pesos to the dollar, an appreciation of 1.1% in the month. The multilateral exchange rate TCM and TCM-5 (based on the US dollar, Canadian dollar, yen, pound sterling and euro) went down by 0.9% and 0.6% respectively. Finally, during November, the real exchange rate index TCR dropped 2.8% while the TCR-5 depreciated by 4.0% both compared to their value in October.

The trade balance at end-November registered a US\$104 million surplus as a result of exports worth US\$1,454 million and imports US\$1,350 million.

The total value of exports was 15.4% up on November 2001. Copper exports again increased as they had done last month, registering 17.7% annual growth. Non-copper exports increased by 14.0% with main non-copper exports growing 13.7% and other exports by 19.7%. The difference with the overall result is explained by other minor components of the trade balance (duty-free zone, goods acquired in ports, etc.) which dropped 6.3% in value compared to a year ago.

Imports at cif value were 14.3% more than in November 2001, all categories registering increases: consumer goods imports up by 20.1%, intermediate goods by 19.0% and capital goods by 15.4%.

Net foreign currency holdings in December amounted to US\$15,351.1 million, US\$173.5 million more than in November because the Treasury increased its operational deposits held in the Central Bank and there were gains from the portfolio, these being only partially offset by commercial banks reducing their deposits in the Bank. The only exchange transaction this month was the sale of US\$0.4 million to the Treasury.

Change in The Classification of Chilean Investment Abroad

The classification of Chilean investment abroad is to be brought in line with the criteria used in the IMF's Balance of Payments Manual (5th Edition 1993). Investment is considered in three categories: direct investment, portfolio investment and other investment. Data base information was analysed for the 1996-2002 series according to the Manual's definitions for grouping investment under these three headings.

Direct investment

Investment is considered to be direct if the investor has at least 10% ownership in the company. This same percentage is required with regard to affiliate companies and associated companies of the direct investment company and to branches owned directly or indirectly by the direct investor.

Portfolio investment

Instruments classified as portfolio investment are essentially tradable. They thus include capital share holdings, debt instruments such as bonds and promissory notes, money market instruments and other financial assets.

Other investment

In this category are placed all investments that cannot be considered direct or portfolio investment. This category is subdivided according to the type of instrument.

(1) Figures corresponding to the new Imacec based on the 1996 input-output matrix. This indicator covers almost all the economic activities included in the GDP.

(2) Computed on the basis of the X-12 ARIMA model available at www.census.gov. The seasonally adjusted series excludes the seasonal and calendar effects. The cyclical tendency series corresponds to the seasonally adjusted series dismissing the irregular component. The ARIMA model selected is (1,0,1)(0,1,1). For more detailed information on the seasonal-adjusting methodology see www.bcentral.cl/Estudios/DTBC/177/dtbc177.pdf. The original series was seasonally adjusted for the 1986-2002 period. The overlapping of the 1986-1995 period with base on 1986 was made preserving the 12-month rate on said basis. The seasonally adjusted Imacec-growth series is not strictly comparable to the quarterly seasonally adjusted GDP growth, because the results of the seasonal adjustment procedures are not equivalent when applied to different frequency series (in this case: GDP and Imacec).

(3) Corresponding to the original series minus indirect taxes.

(4) Change of the cumulative average of a period ending in the specified month as compared to the same period of the previous year.

(5) December to December change.

(6) Provisional figures.

(7) Preliminary figures.

(1) Computed on the basis of the X-12 ARIMA model available at www.census.gov. The seasonally adjusted series excludes the seasonal and calendar effects. The ARIMA model selected is (1,0,0) (0,1,1). In order to improve the seasonally component, as from March 2001 the method to correct the holidays was modified. The original series was seasonally adjusted for the 1986-2002 period. The overlapping of the 1986-1995 period with base on 1986 was made preserving the interannual quarterly rate on said basis.

(2) The quarterly seasonally adjusted GDP series growth is not strictly comparable to the quarterly seasonally-adjusted Imacec growth, because the results of the seasonal adjustment procedures are not equivalent when applied to different frequency series (in this case: GDP and Imacec).

(3) Provisional figures.

(4) Preliminary figures.

(1) Excludes copper smelting and refining.

(2) The series has been seasonally adjusted on the basis of the X-12 ARIMA model, including the effects of Easter, leap years and a vector that adjusts to the number of working days in the week. The ARIMA model used for this index is (2,1,0) (0,1,1) and the seasonally moving average of Henderson in both cases is 3x5.

(3) Change of the cumulative average of a period ending in the specified month as compared to the same period of the previous year.

(4) Provisional figures. Sofofa's figures are provisional as from 1999.

(5) December to December change.

Symbols:

M1 = C + D1. (D1: Demand deposits in checking accounts of the nonfinancial private sector net of float).

M1A = M1 + Dv. (Dv: Demand deposits not included in checking accounts) + Ahv (Ahv: Demand savings deposits).

M2A = M1A + Dp. (Dp: Time deposits of the private sector).

M3 = M2A + Ahp. (Ahp: Time savings deposits, including those for housing).

M4 = M3 + Instruments of the Central Bank of Chile held by the nonfinancial private sector.

M5 = M4 + Treasury promissory notes held by the nonfinancial private sector.

M6 = M5 + Credit bills held by the nonfinancial private sector.

M7 = M6 + Private-sector foreign-currency deposits.

(1) The series has been seasonally adjusted on the basis of the X-12 ARIMA model (available at www.census.gov) including the effects of Easter, leap years, and a vector that adjusts to the number of weekdays, taking holidays into account.

The seasonal moving average of Henderson used is 3x9 and the ARIMA model used is (0,1,1)(0,1,1).

(2) Provisional figures for the original series.

Symbols:

C: Currency in circulation.

D1A: Nonfinancial private-sector checking accounts and other demand deposits net of float, less deposits of the Treasury Banking Account, plus demand savings deposits. Float corresponds to documents received by the banks extended against all type of deposits (public, private and interfinancial).

Dp: Time deposits of private sector.

Ahp: Time savings deposits, including those for housing.

(*) Provisional information obtained through daily reports provided by the financial system.

(1) Corresponds to the mean weighted trading rate in that month, on promissory notes sold by tender.

(2) Real annual rates corresponding to the monetary policy rate (MPR) established by the Central Bank of Chile. Until 8 August 2001 the annual interest rate was applied over the UF change. As from 9 August 2001, the Central Bank of Chile decided to use a nominal monetary policy rate, setting it at 6.5% a year.

(3) Nominal rates with annual base on promissory notes sold by tender.

(4) Annual rates indexed in accordance with the UF change on promissory notes sold by tender.

(5) Annual rate on the observed exchange rate.

28. Interest rates on the Central Bank of Chile instruments (1) (Continued)

(1) Corresponds to the mean weighted trading rate in that month, on promissory notes sold by tender.

(2) Real annual rates corresponding to the monetary policy rate (MPR) established by the Central Bank of Chile. Until 8 August 2001 the annual interest rate was applied over the UF change. As from 9 August 2001, the Central Bank of Chile decided to use a nominal monetary policy rate, setting it at 6.5% a year.

(3) Nominal rates with annual base on promissory notes sold by tender.

(4) Annual rates indexed in accordance with the UF change on promissory notes sold by tender.

(5) Annual rate on the observed exchange rate.

(1) The multilateral exchange-rate index (MER) is a measure of the nominal value of the Chilean peso with respect to a wide basket of foreign currencies. See note on methodology in the *Economic and Financial Report* of January 2000. As from January 2001 the MER includes China and Sweden. (See note on methodology, page 15 of the *Economic and Financial Report* of March 2001).

(2) The MER-5 refers to the currencies of the United States, Japan, the United Kingdom, Canada and the Euro area.

(3) Average annual change.

(4) December to December change.

35. Real observed exchange rate (RER) ⁽¹⁾ (1986 Average = 100)

	Dec.								

(1) Provisional figures.

(2) The real exchange rate is the observed nominal exchange rate multiplied by the quotient between relevant external inflation and the domestic consumer price index (CPI). External inflation is calculated using the WPI, in dollars, of Chile's main trading partners, weighted according to their relative importance in terms of imports and exports - excluding oil and copper. Both the WPI and the countries' exchange rates are in terms of monthly variations. As from January 2001 the real observed exchange rate (RER) includes China and Sweden. (See note on methodology, page 15 of the *Economic and Financial Report* of March 2001). As from January 2002 fuels (oil and its by-products and natural gas) are excluded. (See note on methodology, page 15 of the *Economic and Financial Report* of August 2002).

(3) Same definition as (2) but considers the following industrialized countries: The United States, Japan, the United Kingdom, Canada and the Euro-area countries (Germany, France, Spain, Italy, the Netherlands and Belgium). For fuller information on the new RER-5 index which refers to the five main industrialized countries trading with Chile see the *Economic and Financial Report* of January 2000.

- (1) Provisional figures, including banks and money exchange bureaus of the formal exchange market (MCF).
(2) Data at end of each month, unless otherwise stated.
(3) Represents balance at end of each month, of cash exchange position of banks and money exchange bureaus of the MCF.
(4) Represents purchases less forward sales at the specified date, including operations in pesos and indexed units (UF).
Plus sign : Purchase net balance.
Minus sign : Sales net balance.
(5) Spot balance plus forward balance.
(6) As from 30 May 2002, includes operations carried out pursuant to Chapter IV D.1 of the Compendium of Financial Regulations (CNF) of the Central Bank of Chile and foreign currencies' exchange operations (other than dollar) with Chilean pesos and UFs.

38. Amount of forward operations in currencies within the MCF (formal exchange market) (*)

(US\$ million)

(1) Provisional figures.

(2) Trade Balance figures represent actual imports and exports, based on statistics of the National Customs Service to which the pertinent coverage and valuation adjustments have been made in order to arrive at the figures used in the Balance of Payments.

(3) Balance of Payments: Corresponds to changes in international reserves resulting from balance of payments transactions excluding changes in reserves such as those produced by revaluations, gold monetization and allocation of SDRs. For further explanation refer to the *Boletín Mensual* of the Central Bank of Chile (April, 1981). As from 1993, figures have been calculated to incorporate price restatement of assets.

(*) Provisional figures. Classification of imports has been modified to bring it into line with that of National Accounts. The modification affects figures as from 1990. In consideration of the nature of the goods and also the specific uses to which they may be put, certain consumer- and capital-goods imports had to be reassigned to the intermediate-goods category. In some cases the category has been determined by the end use.

53. Seasonally adjusted total imports and non-oil imports ⁽¹⁾

(1) Provisional figures. The export-price index corresponds to the Paasche index, while the volume index corresponds to the Laspeyres quantum index.

Both are calculated with base 1996 = 100, so the changes registered do not coincide with the figures given in table 57. These calculations exclude exports of repairs on goods.

(2) General tariff regime exports only.

(3) Gold excluded.

- (1) Prices supplied by the London Metal Exchange (LME) and informed by the Chilean Copper Commission (Cochilco).
- (2) Average fob export price computed from shipment value divided by volume. Shipment values, provisionally reported by Customs' statements, are afterwards adjusted. In the previous series these corrections were imputed to the values of the month in which they were provided. The new series, instead, imputs them to the month of the statement being adjusted. For this reason the information of recent months may change again.
- (3) Average cif import price from Customs' statements computed from shipment value divided by volume.
- (4) Cumulative weighted average change of that month with respect to the annual average of the previous year (copper average is not weighted).
- (5) These annual averages are not coincident with monthly figures, because monthly prices have been weighted by each month volume. However the annual average for copper is based on daily data.
- (6) December to December change.
- (-) Not available.

a/ Data on Internet (www.bcentral.cl ; www.bolsantiago.cl ; or www.ine.cl).

b/ The 12-month change of the economic activity index and the totals on imports, exports and trade balance are published on Internet (www.bcentral.cl/ under "new in this site"), between the 17th and the 23rd of each month, or the following working days if they were holidays. From the later date onward, these data, including additional and complementary information, are included in the "Informe Económico y Financiero", and in the permanent website. "Informe Económico y Financiero" is a fortnightly publication of the Banco Central, summarized in this monthly "Economic and Financial Report".

c/ Deadline. Unless unforeseen circumstances, the exact dates of data releases are informed on Internet no later than the week prior to the data release (www.bcentral.cl, under "economic data"/"release of economic statistics")

d/ Releasing is made before the beginning of transactions of the next working day.

e/ Releasing is made the next day after the close of transactions.

f/ On the first date, information covers the first half of the month in question, on the second and third dates, information of the whole month is given.

1/ These publications, excepting IDBCS and PSD, are also posted on Internet (PDF format). The acronyms meaning is as follows:

DGC Deuda del Gobierno Central (quarterly report on central government debt balances: Dirección de Presupuestos).
ELP Ejecución Ley de Presupuestos (quarterly report on Budget Law execution: Dirección de Presupuestos). For more detailed data see 3/.
EyS Indicadores del mes. Empleo y Sectoriales (monthly bulletin on production and employment indicators : Instituto Nacional de Estadísticas).
IDBCC Informativo Diario del Banco Central de Chile (daily report on financial indicators of the Banco Central).
IDBCS Informativo Diario de la Bolsa de Comercio de Santiago (daily report of stock market indicators of the Bolsa de Comercio de Santiago).
IEF Informe Económico y Financiero (fortnightly report on economic and financial data of the Banco Central)
PyR Indicadores del mes. Precios y Remuneraciones (monthly bulletin on prices and wages indicators: Instituto Nacional de Estadísticas)
TIP Tasas de Interés Promedio (Central Bank daily sheet on average interest rates).

2/ See on: www.bcentral.cl; www.bolsantiago.cl; www.dipres.cl; or www.ine.cl

3/ The first release is only through Internet. About end of April of the following year, a printed report ("Estadísticas de las Finanzas Públicas") is published. This report, is also posted on Internet and gives annual and more detailed data on general government, local government, central government, public enterprises and public sector. Data on central government and public enterprises cover until the last finalized year. Data on local government, general government and public sector cover until the year previous to the last finalized

4/ These data are only published on Internet (www.bcentral.cl under "Economic Data" and within "SDDS")
